EXPERIENCE

DeepForrest AI - A CtrlS Company

Jan 2026 – May 2026

AI Intern (Internship)

Hyderabad

- Fine-tuned prompts and experimented with LLM behavior to improve response accuracy, consistency, and task-specific performance.
- Built and evaluated NLP pipelines including text pre-processing and model experimentation.
- Explored AI architectures and techniques such as agentic systems and Lang Chain as part of R&D work.
- Supported deployment workflows using Azure and tested APIs using Postman.
- Contributed to frontend debugging in React.js and followed Git-based version control practices.

Projects

MedBot- A healthcare chat assistant

- Applied RAG to provide context aware answers with data processing, and vector similarity search
- Explored concepts of **LLMs, vector stores, NLP pipelines**, and prompt optimization
- Built backend logic in **Python** to process user queries and interface with vector DB

Ekart App

- Built a simple **Ekart web application** while learning React.js, focusing on understanding components, state management, and basic UI building.
- Strengthened foundational skills in frontend development, debugging, and working with modern web technologies as a beginner.

NLP Data query tool

- It allows users to run data related queries through an LLM API instead of writing code manually.
- Implemented a python code that interprets natural language instructions and converts them into executable logic for automated analysis

PharmaSafe AI

- Built an AI-powered drug safety platform that analyzes FDA adverse event data to detect harmful drug-reaction signals and predict fatal risk using a Light GBM model with 80~89 % accuracy.

Education

Vellore Institute of Technology

Sep 2024 - June 2026

Master of Science - Data Science

CGPA:8.7

- **Coursework:** Data Structures, Algorithms, Databases, Deep Learning, Machine Learning, Artificial intelligence, R Programming

St. Joseph's Degree and PG College

Sep 2021 - June 2024

Bachelor of Science - Computer Science, Statistics ,Mathematics

CGPA: 9.3

- **Coursework:** Data Structures Algorithms, Databases, Statistical inference, operations research , Operating systems, SQL ,R programming

Skills

Languages : Python, JavaScript (React.js), HTML/CSS, SQL , R Programming ,pyspark

Tools GitHub, vscode, azure,postman,nosql DB, GCP, Databricks,pincone
